

### Sample and Blank Data Sheets

With any type of instruction, it is important to take data to determine your student’s present levels of performance and see how much progress they make. The four most common types of data collection are frequency counts, duration, latency, and the percentage of correct trials against the total number of trials. Below we have listed sample data sheets and blank templates that you can use to create your own data sheets.

#### Sample Frequency Counts Data Sheet

<b>Student Name:</b> Viola					
<b>Goal:</b> Given a self-monitoring sheet, Viola will ask a peer at least three different questions 3 days per week for 2 consecutive weeks as measured daily by the student’s self-monitoring sheet and verified by a teacher-created data sheet by September 15, 2021.

## Sample Duration Data Sheet

<b>Student Name:</b> Ray					
<b>Goal:</b> Given a task analysis, Ray will spend at least 5 minutes vacuuming the carpet in 2 out of 3 trials for 4 consecutive days of data collection as measured three times a week by teacher-made data sheets by October 1, 2021.
